

Electrifying goods movement

Proven, scalable solutions to meet your zero emission trucking needs

Regardless of where you are in your electrification journey, bp pulse can simplify your transition to an electric fleet.

Design

Engineering and site design, route analysis, charging strategy analysis, EVSE recommendations, utility engagement, and more.

Deploy

Grant funding identification, LCFS credit management, comprehensive construction project management, permitting, and more.

Operate

Proprietary omega CMS, unlimited configurations, utility tariff navigation, training for drivers, facilities staff, and fleet managers, and more.

Maintain

elevate: hassle-free preventative maintenance, 24/7 customer support, triage and troubleshooting, remote and onsite repair, and more.

Charging-as-a-Service

For school bus fleets that are looking for a single partner to support all aspects of EV charging, our Charging-as-a-Service (CaaS) solution bundles all of our Design, Deploy, Operate, and Maintain services for:

\$0 Upfront capital expenditures (capex)

Fixed long-term pricing (\$/Mile or \$/kwh)

Performance guarantee of 99.9% vehicle uptime

Customer story: Red Hook Container Terminals

10 electric yard tractors | 81% quarterly energy cost savings

Project highlights:

- Predictable energy bills with omega that is minimizing the impact of fluctuating utility tariffs
- Leveraged existing infrastructure to minimize impact to site and operations
- omega integrates with existing telematics and fleet management tools to dynamically update charging schedules in real-time

Optimize charging with our omega™ Charge Management System

omega simplifies charging operations and manages fuel costs. Our proprietary, cloud-based software, automates charging when energy costs are lowest, dynamically responding to your evolving needs each shift, and sends critical alerts in real-time. Features include:

- Cost & battery optimized charging
- Compliance and emissions reporting
- Automated Load Management (ALM), allowing twice the charger capacity without utility service upgrades
- Seamless integration with telematics, route & asset management tools
- Remote diagnostics and troubleshooting
- Active EV & EVSE monitoring

Deploy rapid infrastructure with inrush™ containerized charging

For fleets agencies with physical or operational constraints, implementing permanent EVSE can be another barrier to electrification. AMPLY eliminates this roadblock with our portable, semi-permanent charging infrastructure solution.

Half the cost in half the time

Portable and reusable certified capsules

Customizable and modular designs

Customer story: Manhattan Beer Distributors

5 electric class 8 trucks | 30% in projected savings with CMS

Project highlights:

- Optimizing charging operations for their mixed fleet of CNG and electric trucks with omega
- Guaranteeing EV readiness for consistent operations
- EVSE hardware lifespan prolonged, while enabling grid service participation
- Accelerating expansion of their EV fleet

Let's electrify together
