

Get more from your EV charging project

Upgrade to smarter, reliable EV charging solutions for your fleet

Is your fleet experiencing charger faults, connectivity issues, or project delays? Upgrade with us for simple solutions that overcome these challenges and get your EV fleet operations back on track.

We solve for:

Project delays

You'll get a partner with the expertise to deploy upgraded EV charging infrastructure quickly, at a competitive price. We can use your existing electrical service, avoiding additional construction.

Inrush, our mobile and non-permanent charging solutions, accelerates charging deployments further, with minimal impact to existing operations.

Unmanaged charging

Our charge management software, Omega, automates the charging process, accounting for cost, length of charge, time of day and duty cycles.

We also integrate with any EV, charger, telematics or fleet management tool - avoiding disruption to your current setup.

Poor connectivity

Our cloud-based software comes with a 99.9% uptime guarantee, so you can rely on our platform for your charging operations.

Onsite hardware, our Advanced Site Controller, provides a failover for redundancy, ensuring consistent functionality.

Why upgrade with us?

Rapid deployment

We can quickly install upgraded, competitively priced EV charging infrastructure, using your existing electrical service to avoid additional disruption.

Smarter fleet management

Omega automates charging for lowest cost and dynamically adapts to your schedule. You'll spend less time managing charging and more time focusing on business operations, with reduced energy costs.

Integration with existing tools

Because we integrate with your existing hardware and tools, you'll get smarter fleet management without overhauling your existing setup. You'll also be able to easily add any new technology to this in the future.

Always available, guaranteed

Our charge management software comes with a 99.9% uptime guarantee. This means that Omega will always be there to keep your fleet running smoothly.

Customer stories

Our EV charging solutions have proven to decrease operational costs and offer 99.9% charging infrastructure uptime. We work with our customers to find the right solution to help manage their electric vehicles.

Tri Delta Transit

Faced with charger performance issues and higher-than-projected costs, Tri Delta Transit approached us to manage their charging going forward, leading to 40% savings and improved operational uptime.

Manhattan Beer Distributors

When Manhattan Beer Distributors upgraded to Omega, our charge management software, we integrated with their existing chargers to ensure EV readiness and reduce energy costs by over \$38k.

Palermo Union School District

By installing additional chargers alongside Omega, we helped Palermo Union School District reduce electricity costs by 50% versus previously unmanaged charging.

“bp pulse helped us pinpoint the financial, operational, and equipment improvements we could make to realize 40 percent savings and ensure uptime for our riders who depend on our bus service to go about their daily lives.”

Tri Delta Transit
